

# FILTRATION

INDUSTRY LEADING FILTRATION IS STANDARD  
WORLD'S QUIETEST VACUUM  
INCREASE ENERGY EFFICIENCY BY 50%

With our **HEPAFLO** bags, Industry Leading Filtration is Standard - Cleaner Air and Cleaner Buildings. Now ALL NACECARE DRY VACUUMS are not only **CRI** approved, they meet the requirements for one or more of the following:

- **LEED-EB**
- **HEPA for non-hazardous soil recovery**
- **HEPA for hazardous soil recovery (sealed vacuum bag and filter chamber - the HEPA filter cannot be touched)**

These levels of filtration ensure vastly improved IAQ and reduce dust throughout the facility. All of this is made possible with our HEPAFLO bags. These bags are 65% more efficient than conventional 2-ply paper bags.

Chances are you've heard the term HEPA (High Efficiency Particulate Air) Filter in reference to vacuum filtration and improved Indoor Air Quality (IAQ). As a market leader in vacuum filtration, we have incorporated technology like our Hepaflo bags along with HEPA filter systems in order to maximize IAQ.

If your goal is to:

- 1) Reduce the volume of dust and allergens in your facility by reducing the amount of dirt your vacuums blow back into the air;
  - 2) Improve the IAQ in your facility by reducing the amount of dirt your vacuums blow back into the air
- Then your answer is a NaceCare vacuum equipped with a Hepaflo bag;

Our filtration statistics are as follows:

- PSP Series Machines - CRI approved, Leed-EB compliant, 96% Efficient@ 0.3 micron;
- PPR, RSV, NBV and RBV Series Machines - CRI approved, Leed-EB compliant, HEPA for Non Hazardous Soil Recovery, 99.97% Efficient@ 0.3 micron;

We meet or exceed CRI and LEED-EB specifications on all models and HEPA - NH (Non Hazardous) and HEPA "H" Class (Hazardous) soil recovery requirements on many.
